

What are the identity rules for regular expression?

The two regular expression's P and Q are equivalent (denoted as $P=Q$) if and only if P represents the same set of strings as Q does.

For showing the equivalence of two regular expressions we need to show some identities of regular expression's

Let P , Q and R be the regular expressions then the identity rules are as follows –

- $\epsilon R = R$ $\epsilon = R$
 - $\epsilon^* = \epsilon$ ϵ is null string
 - $(\Phi)^* = \epsilon$ Φ is empty string
 - $\Phi R = R$ $\Phi = \Phi$
 - $\Phi + R = R$
 - $R + R = R$
 - $RR^* = R^*R = R^+$
 - $(R^*)^* = R^*$
 - $E + RR^* = R^*$
 - $(P+Q)R = PR + QR$
 - $(P+Q)^* = (P^*Q^*)^* = (P^*+Q^*)^*$
 - $R^*(\epsilon+R) = (\epsilon+R)R^* = R^*$
 - $(R+\epsilon)^* = R^*$
 - $E+R^* = R^*$
 - $(PQ)^*P = P(QP)^*$
 - $R^*R + R = R^*R$
